

Pharmaceutical-grade Apple Pectin

*ProPectin a day,
keeps the doctor away!*

Farm Produce:

**Mercury • Cadmium •
Lead • Chromium**

Toxins

that we come in contact with everyday

Water Pipe:

Lead • Copper

Shellfish:

Arsenic • Cadmium

Canned Food & Drinks:

Aluminum

Toxins that harm our health

Radiation It is the intangible threat of damage to biological genes that cannot be “touched, smelled, or felt”. The International Commission on Radiological Protection (ICRP) believes that as long as the human body receives radiation, no matter how many doses it has, there is a chance that it will lead to ill-health and congenital disorder. Daily sources of natural radiation include: food, drinking water, building materials, soil, cosmic radiation, etc., and the rest are medical, nuclear, home appliances, etc which are artificially manufactured radiation sources.

Drugs When patients with critical diseases receive chemotherapy and radiation therapy, those chemotherapy drugs containing heavy metals will be accumulated in the body and affect their physical fitness and appetite. It usually takes a long time to recover.

Cosmetics:
Mercury • Lead

Seafood:
Mercury • Arsenic

Building Material:
Radon Gas

Harmful Heavy Metals

Heavy metal pollution mainly comes from industrial pollution, followed by human factors such as traffic pollution and the use of heavy metal products. Heavy metals cannot be naturally metabolized after entering the organism, and accumulate in certain organs of the body, which can cause chronic poisoning, resulting in damage of central nervous system, destruction of blood components and vital organs such as lung, kidney, liver, and even gene mutation and teratogenesis or chronic illness.

Chemicals that are often exposed to everyday life such as cosmetics, paints, building materials, synthetic drugs, food preservatives, automobile exhausts, and household cleaning products. These chemicals will endanger our health in the long run.

It is dissolved quickly when mixing with water. *It is rapidly absorbed after drinking and exerts its chelating function.*

The high-purity nanomolecule apple pectin has negative ions (-) that can be bound with positive ions (+) of heavy metals in the intestinal tract and blood (chelation). *It then can be excreted out of our body through the metabolism.*

Types of toxins that affect the body:

Radiation: *Electromagnetic radiation, Cosmic radiation, wi-fi emissions, Nuclear medicines*

Heavy metals: *Lead, Mercury, Arsenic, Cadmium, Aluminum*

Dietary & Environmental

Chemicals: *BPA, Paraben, PVC, DBP, Formaldehyde, Dioxin*

Apple pectin becomes gelatinous after absorbing water in the stomach. *It increases satiety and delay the speed of food digestion. It may also help stabilize postprandial blood glucose. Apple Pectin can also be combined with bile and excreted from the body. It reduces the cholesterol to be refluxed back to the bloodstream. It may help stabilize cholesterol in the body and maintain cardiovascular health.*

Apple pectin is a soluble fiber that absorbs water and toxins in the large intestine and increases the weight and volume of excrement, thereby enhancing bowel movement and accelerating the release of toxins from the body.

Constipation: *Apple pectin helps to expand the volume of the feces and excreted after absorbing water so as to maintain the cleanliness of intestinal tract.*

Diarrhea: *Apple pectin can also absorb excess water from the stool and play a role in antidiarrheal.*

(Constipation, diarrhea problems, please refer to "reminder")

What is Propectin Apple Pectin?

The soluble fiber between apple peel and pulp is refined into the only 100% water-soluble concentrated nano-powder pectin entering into blood vessel on the market. Owing to pectin contains D-galacturonic acid, its molecules becomes strongly viscose and absorptive allows natural chelating and detoxifying effect. It is 4.5 times higher than other products containing only a few traces of apple pectin on the market. Propectin can accurately provide 3-9 grams of pectin per day to achieve the standard dose of cell detoxification.

Is apple pectin safe?

Apple pectin has been deemed by the WHO to be non-toxic and safe to be consumed by pregnant women and children. Studies also show that apple pectin consumption prior to becoming pregnant may help provide a more pure environment for fetus development during pregnancy.

How does apple pectin eliminate heavy metals from the body?

Pectin molecules are composed of negatively charged ions which allows them to bind with the positively charged ions of heavy metals and are eliminated from the body. This process is called "natural chelation". To maximize the power of natural chelation, one must choose concentrated form of apple pectin. Most apple pectin products on the market only contain trace amount of apple pectin, and cannot achieve the same health benefits as ProPectin.

Does apple pectin excrete nutrients in the body?

The amount of nutrients ingested must be greater than toxins in a normal diet. Pectin is aimed at the excretion of toxins. The nutrients will be continuously ingested in the daily diet as only toxins will be excreted with apple pectin. So there is no need to worry about the problem of excretion of nutrients. Because of the difference in body composition, you are advised to take comprehensive vitamins for nutrients balancing. (It is recommended to take supplements at least 1 to 2 hours after Propectin drink.)

Suitable for all ages

Kid

Adult

Elder Citizens

How does ProPectin help stabilize cholesterol levels?

ProPectin binds with bile acid in the colon and eliminates it through the body's natural elimination process. This decrease signals the liver to synthesize more bile acid. The liver in turn uses cholesterol in the blood to make more bile acid. Reducing the overall cholesterol in the bloodstream may help to stabilize cholesterol level.

How does ProPectin help stabilize glucose levels?

When apple pectin is ingested, its gel like characteristics act as a barrier in the intestinal wall, slowing the rate of sugar absorption into the bloodstream. It may help to stabilize the postprandial glucose level.

Are people concerned blood sugar suitable for ProPectin?

Each sachet of ProPectin contains 10 grams of beetroot, sugarcane-made pharmaceutical grade fructose equal to only half the amount of fructose in apples. Fructose has less effect on diabetes than glucose and sucrose. US Medical Daily reported that red beetroot helps liver detoxification and relieves bile diseases. Tamarind is also known as "Blood Purifier" which helps red blood cells regeneration and recovery and supplies fresh oxygen to the body.

How to take ProPectin

Adult: Take 1 sachet before meal. 1 to 3 sachets a day.

Children (under 12 or below 40kg): Take 1/3 sachet before meal. 1 sachet a day.

Pour the contents into 150 - 200 ml of water and shake/stir well for 10-15 seconds to be ready for drinking.

★ **Note:** If you need to improve other health problems such as sub-health or critical diseases, please consult a dietitian for the appropriate dosage.

Tips

Concerned about blood sugar and gout:

Please take it 30 minutes before meal to achieve the best results.

Improve Constipation:

Shake/stir 1 sachet with 300 ml of water till it's diluted.

Improve diarrhea:

Shake/stir 1 sachet with 100 ml of water till it's thickened.

ProPectin Endorsement- Pro Dr Michael Nobel

World-renowned Scientist

- Descendant of the Nobel Family, known for the Nobel Prize
- Pioneered on the introduction of Magnetic Resonance Imaging in the early 80's, where he was active for 26 years
- Presently chairman of the Nobel Sustainable Trust Foundation in Zurich (Switzerland)
- Winner of numerous honours and awards

“I am endorsing ProPectin because research shows it can substantially **reduce the amounts of radionuclides** such as **Cesium-137** and **heavy metals** in the human body.”
